**Please find below and/or attached an Office communication concerning this application or proceeding.**

The time period for reply, if any, is set in the attached communication.

<b>Office Action Summary</b>	<b>Application No.</b>	<b>Applicant(s)</b>	
	10/590,120	HUTT, DETLEF	
	<b>Examiner</b>	<b>Art Unit</b>	
	LAWRENCE D. FERGUSON	1794	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

#### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

#### Status

- 1) Responsive to communication(s) filed on \_\_\_\_.
- 2a) This action is **FINAL**.                    2b) This action is non-final.
- 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

#### Disposition of Claims

- 4) Claim(s) 1-22 and 24-33 is/are pending in the application.
  - 4a) Of the above claim(s) \_\_\_\_ is/are withdrawn from consideration.
- 5) Claim(s) \_\_\_\_ is/are allowed.
- 6) Claim(s) 1-22 and 24-33 is/are rejected.
- 7) Claim(s) \_\_\_\_ is/are objected to.
- 8) Claim(s) \_\_\_\_ are subject to restriction and/or election requirement.

#### Application Papers

- 9) The specification is objected to by the Examiner.
- 10) The drawing(s) filed on \_\_\_\_ is/are: a) accepted or b) objected to by the Examiner.
 

Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).

Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

#### Priority under 35 U.S.C. § 119

- 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
  - a) All    b) Some \* c) None of:
    1. Certified copies of the priority documents have been received.
    2. Certified copies of the priority documents have been received in Application No. \_\_\_\_.
    3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

## ***DETAILED ACTION***

### ***Information Disclosure Statement***

1. The references disclosed within the information disclosure statement (IDS) filed on August 18, 2006, have been considered and initialed by the Examiner.

### ***Claim Rejections – 35 USC 112***

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 6 and 28 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 6, the phrase, “covering layer contains 0.05-0.25% by weight” is indefinite. It is unclear what the covering layer contains at 0.05-0.25% by weight.

In claim 28, the phrase, “the surface is  $1*10^{12}$  to  $4*10^{12}$  Ohm/m<sup>2</sup>” is indefinite. It is unclear what surface property is  $1*10^{12}$  to  $4*10^{12}$  Ohm/m<sup>2</sup>.

In claim 31, the term “COC” is indefinite. The term, “COC” has not been defined in the specification or claims.

***Claim Rejections – 35 USC § 103(a)***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 1-3, 6-14, 18-22, 24-27 and 30-33 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kuroki et al (U.S. 6,544,607).

Kuroki discloses a multiple layer biaxially oriented film comprising a base layer (column 7, lines 31-37 and column 8, lines 53-66) where an antistatic layer, for example, is formed on a surface of the film (covering layer) (column 8, lines 57-66). The covering layer is a polyester composition comprising aliphatic hydroxycarboxylic acid, glycerin fatty esters and mica (column 2, lines 7-12, 50-54 and column 6, lines 15-25, 44-45). The glycerin component is 1 to 10 parts by weight of the aliphatic polyester (column 2, lines 47-49).

Although Kuroki does not explicitly disclose the weight percentage of mica, the reference teaches anti-blocking agents, such as mica, can be added in the range wherein the invention can be accomplished (column 6, lines 15-23). Because the reference teaches the weight percentage of the mica can be varied, the weight percentage of the mica is optimizable. It would have been obvious to one of ordinary skill in the art to optimize the mica component of the covering layer because discovering

the optimum or workable range involves only routine skill in the art. The weight percentage of mica directly affects gloss of the film. *In re Aller* 105 USPQ 233 and see *In re Boesch*, 617 USPQ 215. Additionally, it would have been obvious to one of ordinary skill in the art to add mica in a weight percentage between greater than 0 to 0.5 or 2% so the mica would not have a negative impact on the surface gloss of the film by increasing the opacity of the surface, as in claims 1-2, 6, 18 and claim 26. Recitation of a newly disclosed property does not distinguish over a reference disclosure of the article or composition claims. *General Electric v. Jewe Incandescent Lamp Co.*, 67 USPQ 155. *Titanium Metal Corp. v. Banner*, 227 USPQ 773. Regarding claim 6, it is unclear what the covering layer comprises at 0.05-0.25% by weight. Regarding claim 26, the phrase  $\leq$  0.3% by weight of wollastonite is interpreted as including 0.0% of wollastonite.

Concerning claim 3, the reference discloses the glycerin fatty ester is glycerin monostearate (column 6, lines 44-45).

Concerning claims 7-8, the covering layer additionally contains kaolin (column 6, lines 15-23 and 54-64). Although Kuroki does not explicitly disclose the weight percentage of kaolin, the reference teaches a filler, such as kaolin, can be added in the range wherein the invention can be accomplished (column 6, lines 15-23). Because the reference teaches the weight percentage of the kaolin can be varied, the weight percentage of the kaolin is optimizable. It would have been obvious to one of ordinary skill in the art to optimize the kaolin component of the covering layer because discovering the optimum or workable range involves only routine skill in the art. The weight percentage of kaolin directly affects gloss and opacity of the film. *In re Aller* 105

USPQ 233 and see *In re Boesch*, 617 USPQ 215. Additionally, it would have been obvious to one of ordinary skill in the art to add kaolin in a weight percentage between greater than 0.5 and 0.3% so the kaolin would not increase the opacity of the surface, as in claim 8. Recitation of a newly disclosed property does not distinguish over a reference disclosure of the article or composition claims. *General Electric v. Jewell Incandescent Lamp Co.*, 67 USPQ 155. *Titanium Metal Corp. v. Banner*, 227 USPQ 773.

Concerning claim 9, the polymer of aliphatic hydroxycarboxylic acid is 80 parts by weight of the covering layer (column 7, lines 57-63).

Concerning claims 10 and 27, the aliphatic hydroxycarboxylic acid is polylactic acid (column 2, lines 50-59), which is PLA.

Concerning claim 11, Kuroki discloses the film has excellent transparency and comprises 90 percent by weight of polyhydroxycarboxylic acid (column 2, lines 15-22, 46-54) where the film is cut and/or formed into a bag, which is sealed (column 8, lines 4-12). The sealed film is interpreted as having a top layer (covering layer) and bottom layer (base).

Concerning claims 12, 19-22 and 30-31, layers having filler material such as kaolin, titanium oxide or calcium carbonate can be applied to either surface of the film (column 6, lines 15-22, 54-64 and column 8, lines 57-67) where the filler material increases the opacity of the applied layer and is vacuole initiating, as defined on page 11 of the instant specification. Because Kuroki discloses a base with equivalent materials as in instant claim 18, it would have been obvious to one of ordinary skill in

the art to include the optimum value of the vacuole initiating filler. Recitation of a newly disclosed property does not distinguish over a reference disclosure of the article or composition claims. *General Electric v. Jewe Incandescent Lamp Co.*, 67 USPQ 155. *Titanium Metal Corp. v. Banner*, 227 USPQ 773. Additionally, it would have been expected to one of ordinary skill in the art for the quantity of titanium oxide to have a weight percentage of 3 to 15% to maintain a proper opacity without adding too much coloration to the packaging film, which could penetrate to the product of the film.

Concerning claim 13, the covering layer has a thickness of 5 to 1000 $\mu\text{m}$  (column 7, line 67 through column 8, line 3).

Concerning claim 14, Kuroki discloses the covering layer is sealable (column 8, lines 4-12). In claim 14, the term “sealable” constitutes a ‘capable of’ limitation and that such a recitation that an element is ‘capable of’ performing a function is not a positive limitation but only requires the ability to so perform.

Concerning claims 24-25 and 33, the reference discloses glycerine fatty ester and antiblocking particles are incorporated in the covering layer along with lactic acid polymers and polyethylene, which is a polyolefin (column 2, lines 50-59, column 6, lines 15-32, 44-53) where the lactic acid and/or polyethylene are interpreted as being a concentrate, based upon the instant specification’s disclosure of a concentrate being based on lactic acid polymers or polyolefins, such as polyethylene (1<sup>st</sup> paragraph, page 14).

Concerning claim 32 Kuroki discloses a packaged product comprising a film having a multiple layer biaxially oriented film comprising a base layer (column 1, lines 7-

Art Unit: 1794

16, column 2, lines 26-34, column 7, lines 31-37 and column 8, lines 53-66) where an antistatic layer, for example, is formed on a surface of the film (covering layer) (column 8, lines 57-66). The covering layer is a polyester composition comprising aliphatic hydroxycarboxylic acid, glycerin fatty esters and mica (column 2, lines 7-12, 50-54 and column 6, lines 15-25, 44-45). The glycerin component is 1 to 10 parts by weight of the aliphatic polyester (column 2, lines 47-49).

***Claim Rejections – 35 USC § 103(a)***

6. Claims 4-5, 15-17 and 28-29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kuroki et al (U.S. 6,544,607) in view of Bissot (U.S. 4,818,782).

Kuroki is relied upon for claim 1, as above. Although Kuroki discloses a package film comprising aliphatic hydroxycarboxylic acid, a glycerine fatty ester and mica, the reference does not explicitly disclose the particle size or aspect ratio of mica. Because Kuroki does not specifically teach the particle size or aspect ratio of mica, one of ordinary skill in the art would look to the prior art, such as Bissot, to teach a specific mica for use within the disclosed film. Bissot teaches a multilayer package (column 1, lines 10-15) comprising mica having a particle size smaller than 38 microns and having an aspect ratio of 10 to 150 (column 4, lines 4-5, 20-36). Kuroki and Bissot are combinable because they are related to a similar technical field, which is packaging films. Therefore, it would have been obvious to one of ordinary skill in the art to have

Art Unit: 1794

substituted the mica of Bissot for the mica of Kuroki to achieve the predictable result of improving the barrier properties of the packaging film (column 1, liens 57-59 and column 2, lines 33-36), as in claims 4-5.

Concerning claim 15-17 and 28-29, Kuroki does not disclose the gloss, surface resistance or dynamic coefficient of friction. Because Kuroki discloses a film with equivalent materials as in instant claim 1, it would have been obvious to one of ordinary skill in the art to include the optimum values of the gloss, surface resistance and dynamic coefficient of friction. Recitation of a newly disclosed property does not distinguish over a reference disclosure of the article or composition claims. *General Electric v. Jewe Incandescent Lamp Co.*, 67 USPQ 155. *Titanium Metal Corp. v. Banner*, 227 USPQ 773.

### ***Conclusion***

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Lawrence Ferguson whose telephone number is 571-272-1522. The examiner can normally be reached on Monday through Friday 9:00 AM – 5:30PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Keith Hendricks, can be reached on 571-272-1401. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
